

About Me

Hello, I am Kenneth Rinderhagen Jr Born in Utah and Raised in Grand Terrace Education through the Colton California Unified school district completing my education at the Slover Mountain. 1977 I was on the Greens Baseball Team along with Cub Scouts, Webelos completing my tour of the boy scouts after achieving First Class. Scouts was nice we did a lot of camping learning of outdoor skills, safety measures, completed a lot of achievements rope tying, bridge making, cooking, how to get along and help others. Competitions like the pine wood derby place, converting one man's desires into reality consisting of fun completion, rewards and the satisfaction of achievement. The Thrills of spending days hiking in woods bears would not travel carrying packs designed and filled with your talents in necessity decision making. Learning to achieve, good awards form our elders, leaders and fellow participators, obtaining a large vast knowledge of right from wrong, being honest, and loyal. Education in school was quit competitive, too i favored extracurricular, auto shop wood shop, and I even had electronics and plastics along with metal and machine shop. A real wonder to why I had to make up required credits at a continuation school. The completion of school was not a total loss my rewards keep coming when I neighbor helped me get enlisted into the United States Navy in which I qualified for the aviation machinist program. Successful completing that I was accepted to the newly commissioned squadron VA 155, chills and thrills and even survived the major spills. From snow covered decks to fog walking in the rain and sleet. Airplanes crashing on the decks, along with waves, twice the size of the biggest ship, safety required and strictly enforced, shots to be called, meant and made along with explained to reason and effort. The return home was not a complete los skills in construction, tile setting, auto mechanics and fast food keep the days busy bring more achievements and consequences for bad calls. The year 1994 I completed a Course with Paul Lucente general contractors licensing, learned many additions to the skills taught in the

field and with some that I did not know about well worth the time. Accepting a Job a working as security guard in New Port Beach followed my activities into the year 1999, great job I wish I had more money seeing how it is an expensive place to live. From there my sister's husband put me to work at his father's Stationary factory, achieved well and performed well, just can't make the economy grow and money multiply. Picked up a nice welcome in the Santa Monica out reaches and employment services managed to qualify for classes in Culinary Arts at the Saint Joseph center in Venice Beach, got a job as Mechanic though at The A & A Auto Service. Lasted four years and lead to my ASE from the State of California along with a certification in the course of Engine performance, not to mention the conquering of alcohol addiction, completing a the proposition 36 program with a current sobriety date July 15 2005. Pressures and expanses again lead to my return to my brother in laws which went well until my mother divorced her second husband and I was offered t stay with her while I finish school, leading to the present doing auto motive troubleshooting and small repairs, along with some refurbishing at apartments when they get the opportunity while working towards the completion of Bachelors in criminal justice. Girlfriends along the way we just seemed to be more interested in our separate ways, not having any children made the toughest of time a little easier, and the chase of victory a little easier. Though we had great times we still do only our separations brings disappointment to our minds.
